CSC 351 - Sprint 3

Student: Linh Nguyen (LN)
GitHub: Dieulinhh23
Project: SocialU
Area: Accounts, Profile, and Friendships
Status checked: November 4, 2026

1. Sprint goal

My goal was to let students review their own login history, including recorded dates, times, and session status. The work covers the database, authenticated API, user interface, and tests.

2. GitHub Project

Team Project | My Sprint 3 board

3. Completed requirements

Traces to: UR-107. The following SRS issues include the shall statement, acceptance criterion, task sub-issues, branch/PR links, and evidence screenshot.

Completed SRS requirement	Issue / evidence	Merged PR
SRS-107.1, LN — Login-history access.	#858	#963
SRS-107.2, LN — Complete login history.	#859	#964
SRS-107.3, LN — Login date.	#860	#965
SRS-107.4, LN — Login time.	#861	#966
SRS-107.6, LN — Active-session status.	#879	#967

These five SRS issues and all 20 task sub-issues are closed and assigned to me. Their implementation branches were named for the SRS items, and the PR descriptions close the completed tasks.

4. Evidence and verification

Real screenshots are attached to the SRS issues and included on page 2. They show recorded sign-ins, dates/times, current Active and Ended sessions, and older records reached through pagination. The November 3 integrated main checkpoint passed 1,371 tests and the production build.

5. Unfinished work

My Board has merged code and save/reload evidence, but full acceptance remains incomplete. Location recording was deferred. Remote-logout acceptance also remains incomplete. These items are not claimed Done; remaining work needs to return to Product Backlog for Sprint 4. GitHub board synchronization is still pending.

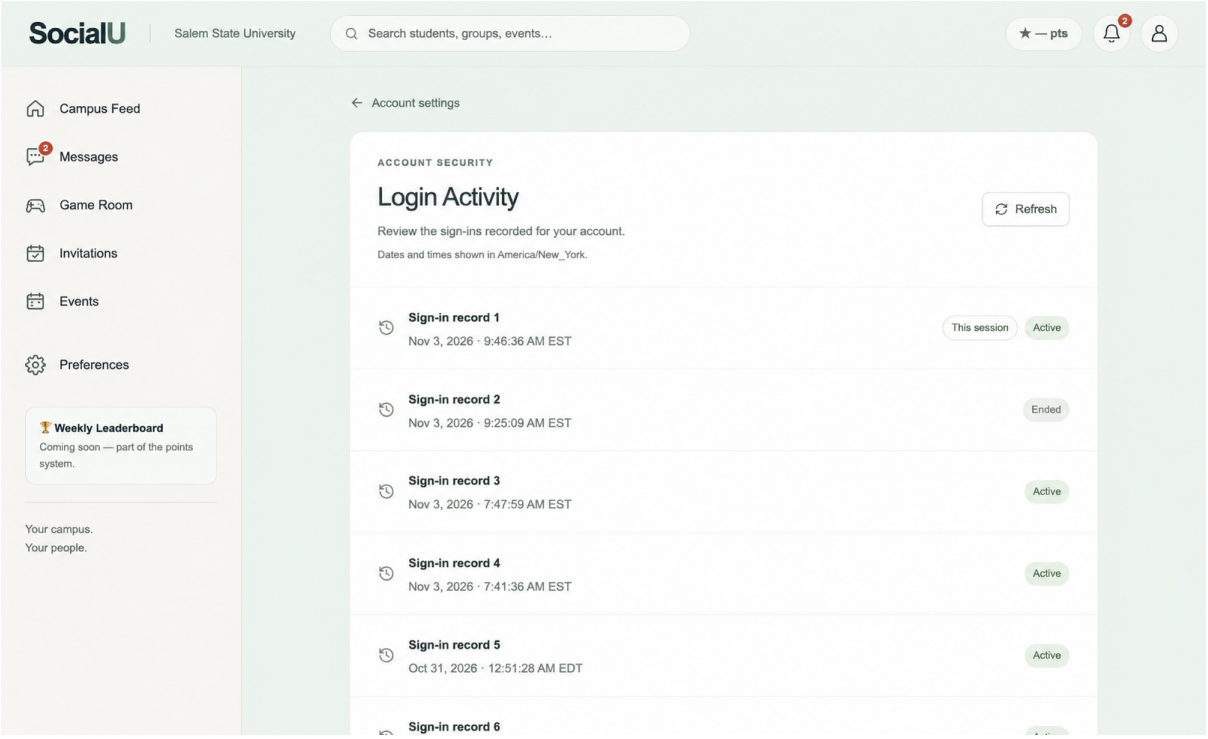

6. Sprint demo

I will use one laptop and one integrated, checked-in codebase to show the SRS cards/tasks, demonstrate the five completed behaviors, and open their merged PRs. I must attend demo day and submit the Project, SRS issue, and merged PR links in Canvas.

Sprint 3 - Screenshot Evidence

Based on running-application screenshots captured November 3, 2026. Mouse pointers were removed for presentation; original captures remain linked below and on the SRS issues.

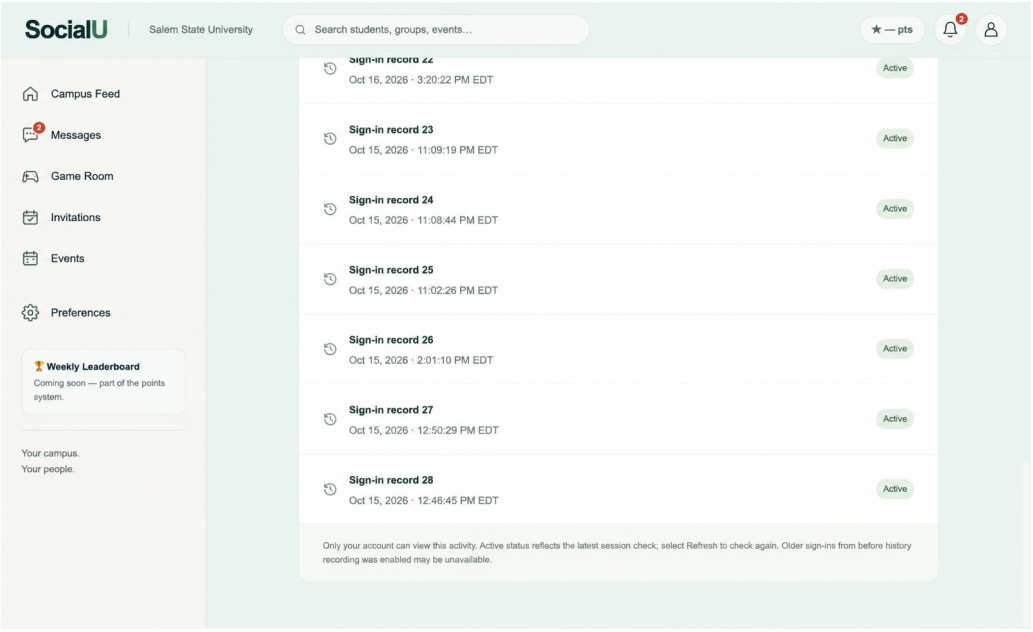

Login history, recorded date/time, and session status

Supports SRS-107.1, 107.3, 107.4, and 107.6. Shows an Ended sign-in and the current Active session. This does not prove preservation of the current session during remote logout.

Open full-resolution screenshot

Complete history through older records

Supports SRS-107.2. Load older sign-ins reached all 28 recorded entries during the observed check.

My Board - Sprint 3 Progress

SRS-124.1, LN — Save My Board.

The system shall persist the signed-in student's personal profile board when the student selects Save board.

Acceptance criterion: Given the student has valid board edits, when Save board succeeds and the profile is reloaded, then the saved card contents, positions, sizes, and rotations are displayed on that student's My Board.

SRS issue #1038 | Merged PR #1043 | SRS implementation branch

Verified work and supplied evidence

The board supports notes, photos, stickers, project and Spotify cards. PR #1043 is merged. On November 4, all 46 relevant model, API and disposable-database tests passed on local commit badfbde. Linh reports team acceptance of the scope addition.

In the conversation, Linh supplied an editor/viewing pair and confirmed that the resized laptop sticker remained after Save board and refresh. Linh also confirmed that a later viewing screenshot was taken from a classmate account without editing controls. Those recent images still need attaching to the SRS issue; they are not reproduced below.

Earlier own-account fresh-load capture, November 3. This image supports saved-board rendering; it is not the later classmate-account screenshot.

Remaining acceptance

Verify a clearly changed rotation after save/reload and blocked access. Parent #1038 and tasks #1039-#1042 remain open. Preserve the recorded process finding: the prototype preceded SRS registration. No completed-item claim is made for My Board.
