SocialU - Sprint 3 Submission

Linh Nguyen (LN) | GitHub: Dieulinhh23

Accounts, Profile, and Friendships | Status checked November 4, 2026

This submission presents five completed Login Activity requirements. Each has an assigned SRS issue, four real task sub-issues, a merged implementation PR and a running-application screenshot. Additional board and device-security work is reported separately with its remaining acceptance work.

Team GitHub Project | Linh Nguyen - Sprint 3 board

Source SRS | URD | Implementation and evidence

Completed requirements - Traces to: UR-107

Exact SRS issue title	SRS issue	Merged PR
SRS-107.1, LN — Login-history access.	#858	#963
SRS-107.2, LN — Complete login history.	#859	#964
SRS-107.3, LN — Login date.	#860	#965
SRS-107.4, LN — Login time.	#861	#966
SRS-107.6, LN — Active-session status.	#879	#967

All five SRS issues and their 20 task sub-issues are closed and assigned to Dieulinhh23. Each SRS issue contains its shall statement, acceptance criterion, Traces to line, actual SRS branch, implementation PR and screenshot.

Implementation

Supabase records real sign-ins in durable history. An authenticated owner-only API returns records in stable pages of 25. The UI shows recorded dates and times in the browser timezone, current-session identification, and Active or Ended status. History remains after a provider session ends.

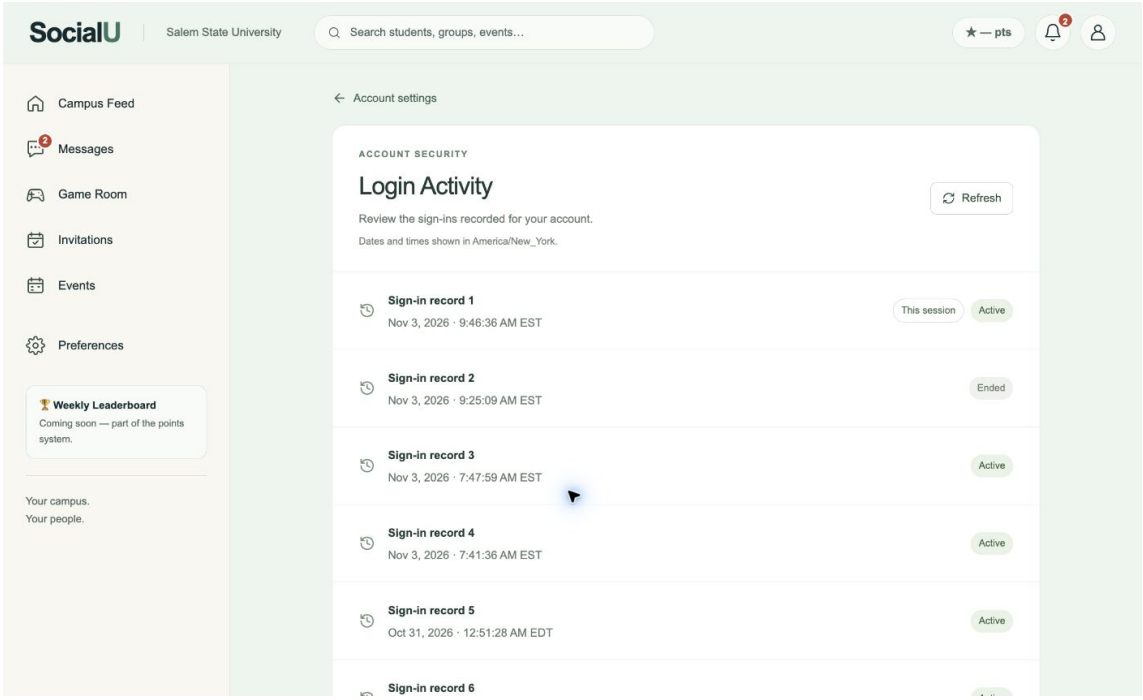

Verification record

The previously integrated main checkpoint passed 1,371 tests in 159 files and its production build. Real pagination reached 28 records. Additional November 4 device-branch checks passed 32 relevant tests and a production build; the sign-in/context/database run passed 51 tests. Those later branch checks are not represented as completed live remote-logout acceptance.

Running application evidence

Genuine screenshots captured November 3, 2026. The linked issues attach the evidence to each completed SRS item.

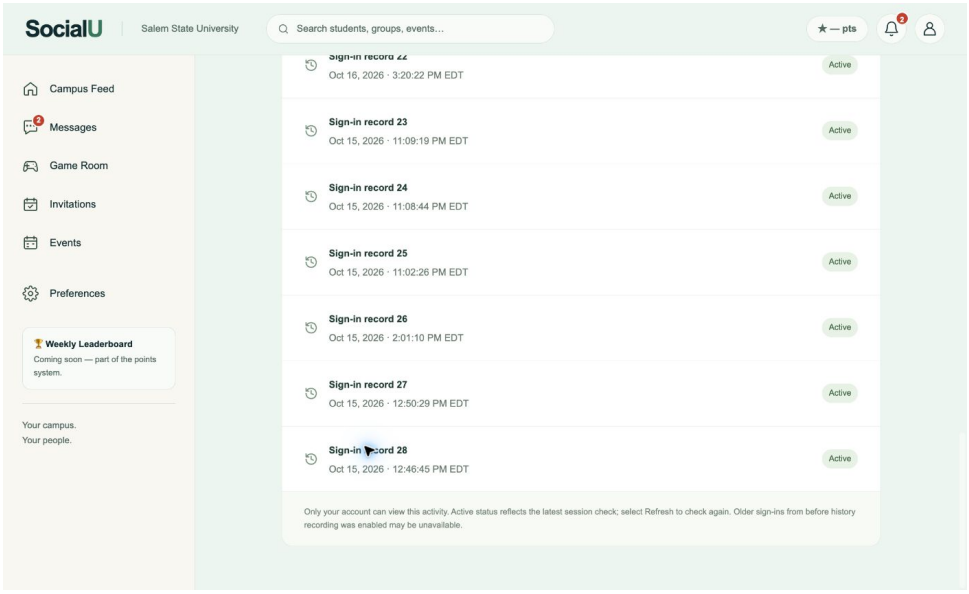

History, date/time, current and ended sessions

Supports SRS-107.1, 107.3, 107.4 and 107.6. The earlier 9:25:09 AM EST sign-in remains Ended beside the later current Active sign-in. Sign-in was restored before this capture; it does not prove current-session preservation during remote logout.

Open original screenshot

Older records remain reachable

Supports SRS-107.2. Load older sign-ins reached the last recorded entries; refresh and reload retained access. Disposable-database checks separately cover larger pagination, account isolation, expiry and revocation.

My Board - implemented; acceptance incomplete

SRS-124.1, LN — Save My Board. | Traces to: UR-124

Shall: The system shall persist the signed-in student's personal profile board when the student selects Save board.

Acceptance criterion: Given the student has valid board edits, when Save board succeeds and the profile is reloaded, then the saved card contents, positions, sizes, and rotations are displayed on that student's My Board.

SRS issue #1038 | Merged implementation PR #1043 | Actual code commit ccd4b3f

This genuine fresh-profile-load capture returned the saved stickers, hello note and music card. Linh confirmed that the earlier visitor-looking screenshot was from her own account, so it is not treated as separate-student evidence.

Status and remaining acceptance

PR #1043 is merged. SRS #1038 and tasks #1039-#1042 remain open at the verified GitHub checkpoint. Linh reported team acceptance of the SRS addition. Save/read values, fractional positions and rotations, ownership and authorized reads have automated coverage; a complete running-app size/rotation reload and separate-student permission check remain unverified.

Process finding: prototype coding began before registration of SRS-124.1 and before its SRS-named implementation branch. The submission retains this limitation; it does not backdate branch compliance.

Sprint closeout and demo

Completed work is distinguished from implemented work that still lacks acceptance evidence.

Carryover to Product Backlog / Sprint 4

SRS / issue	Current implementation	Work still required
107.5 - Login location #878	PR #1068 Merged	Deferred at Linh's request. Hosted recorded-location screenshot and acceptance are incomplete.
107.7 - Remote logout option #880	PR #1072 Merged	Running-app evidence of eligible other-session controls and cancellation.
107.8 - End selected remote session #881	PR #1073 Merged	Two-browser evidence that only the selected session loses access.
107.9 - Preserve current session #882	PR #1071 Open / unmerged	PR remains open. Verify the current session stays usable after remote logout.

The existing implementation is retained. These four SRS items are not counted as Done in this submission. My Board also remains incomplete against its full current task acceptance. The professor permits unfinished work to be returned to the Product Backlog and explained during the demo.

GitHub synchronization limit

At this closeout, GitHub's connector rejected issue updates with HTTP 403, and browser issue navigation failed. Consequently, the proposed Product Backlog/status notes have not been saved to GitHub. The accompanying Board_Updates.txt contains the exact remaining board updates; this PDF does not claim they were applied.

Five-minute demo sequence

1. Show the Sprint 3 board, five completed SRS cards and their task progress.
2. Run one integrated, checked-in codebase on one laptop. Open Login Activity while signed in.
3. Show recorded dates/times, current Active and an existing Ended record.
4. Use Load older sign-ins, Refresh and reload to show retained history.
5. Show merged PRs #963-#967. Present My Board as additional implemented work with the acceptance limits above.

Before submitting in Canvas

Submit the project link, the five completed SRS issue links and their five merged PR links from page 1. Include this PDF as supporting evidence if the submission permits a file. Disclose unfinished work and reconcile its board status. Attend the team sprint demo; this document cannot satisfy the attendance requirement.
